(GRADES: LKG to XII)
“PREVENTION IS BETTER THAN CURE”

Dear Parent,

The school strives hard to achieve the all-round development of the students. It is always committed towards good health, sanitation and clean environment so that the goal of holistic growth materializes for the students. In the wake of the spiraling cases of fever all around and in order to join the mass movement to control ‘Dengue’, it is advised to all the parents to follow the precautionary measures which are stated below:

- Students to apply mosquito repellent on the exposed parts of the body (if possible).
- They are also advised to trim their nails once a week and also wash their hands before and after their meals. This will help them to be safe, disease free and healthy.
- You are requested **not to send your ward to school** in case he/she is suffering from fever.
- Keep yourself and your surroundings clean so that exposure to mosquitoes or breeding of the mosquitoes can be avoided.

To instill the values of personal commitment towards a healthier society, students are also given awareness sessions for prevention of dengue and Malaria fever. We would request the parents to take measures to prevent the breeding of mosquitoes in and around your homes by avoiding water logging in coolers, flowerpots, AC trays etc., apart from using mosquito repellent coils and sprays.

Our one step complimented by your support will definitely make our vision of healthy tomorrow a reality.

Note: The school is making its own efforts by getting the school disinfected through fumigation on regular basis.
